

## **AI in Education**

This session will be a "hands-on" exploration of how AI can support teaching and learning.

Participants will have an opportunity to explore and apply various AI applications that can support teachers and students. Participants will also explore how AI can be a "productivity" tool supporting the everyday administrative and planning activities for both teachers and administrators.

Topics will include: AI basics; Acceptable and unacceptable uses of AI; Policies on the use of AI in the classroom; Lesson plan creation and student support using AI; Productivity aids using AI; and Identifying AI-created content.

Small group and individual work will be supported throughout this day-long workshop.

Presenters from CDLS and eNetLearning

Carolyn Gardner

Dan Morris
