

Differentiation with AI

This session will be a focused work session on how AI can support teaching tasks related to differentiation, goal setting, and lesson planning for special populations such as advanced and gifted learners as well as special education learners.

Participants will have an opportunity to apply various AI applications that can support teachers and students. Participants will also explore how AI can be a "productivity" tool supporting the everyday administrative and planning activities for both teachers and administrators. Topics will include Lesson plan creation and student support using AI; Productivity aids using AI to support goal creation, IEP and ALP development and email communication efficiency.

Small group and individual work will be supported throughout this day-long workshop.
